## ARTICLES

|                                                                                                                                                   |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Effects of an inshore artificial reef on the trophic dynamics of three species of estuarine fish<br>Kirsten A Simonsen and James H Cowan Jr ..... | 657 |
|---------------------------------------------------------------------------------------------------------------------------------------------------|-----|

|                                                                                                                                                                                                                                                   |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Growth strategies of the swordtip squid, <i>Uroteuthis edulis</i> , in response to environmental changes<br>in the southern East China Sea—A cohort analysis<br>Kae-Yih Wang, Ke-Yang Chang, Cheng Hsin-Liao, Ming-An Lee, and Kuo-Tien Lee ..... | 677 |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|

|                                                                                                                                                                                                                                                                     |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Variability in the growth patterns of <i>Loxechinus albus</i> along a bathymetric gradient associated<br>with a fishing ground<br>Carlos Molinet, Cecilia A Balboa, Carlos A Moreno, Manuel Diaz,<br>Paulina Gebauer, Edwin J Niklitschek, and Nancy Barahona ..... | 699 |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|

|                                                                                                                                                                                                                           |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Whole-body concentrations of elements in three fish species from offshore oil platforms and<br>natural areas in the Southern California Bight, USA<br>Milton S Love, Michael K Saiki, Thomas W May, and Julie L Yee ..... | 717 |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|

## NEW TAXA ARTICLE

|                                                                                                                                                                               |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| A new species of the genus <i>Eugorgia</i> (Cnidaria: Octocorallia: Gorgoniidae) from mesophotic reefs<br>in the eastern Pacific<br>Odalisca Breedy and Hector M Guzman ..... | 735 |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|

## PORTRAITS OF MARINE SCIENCE

|                                                                                                                                                                                                                        |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| First report of the table coral <i>Acropora cytherea</i> (Scleractinia: Acroporidae) from Oahu (Main<br>Hawaiian Islands)<br>Randall K Kosaki, Daniel Wagner, Jason C Leonard, Brian B Hauk, and Kelly A Gleason ..... | 745 |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|

## NOTES

|                                                                                                                                                                                   |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Recovery of <i>Acropora palmata</i> in Curaçao: a comparison with the Florida Keys<br>Allan J Bright, Dana E Williams, K Lindsey Kramer, and Margaret W Miller .....              | 747 |
| Higher catch rates around the full moon for blue marlin, <i>Makaira nigricans</i> , in a diurnal trolling fishery<br>Tamaki Shimose, Kotaro Yokawa, and Katsunori Tachihara ..... | 759 |
