The October *Notices* features an article in which a very engineering-oriented mathematician recounts his experiences collaborating with people from many different disciplines. It also showcases a mathematical analysis of pollution. There is an article about using IMMERSE-style courses to engage students in research. There is a second installment of the Benoît Mandelbrot memorial. Finally, an article about the PCAST report focuses attention on a hot-button issue in current mathematics education.—*Steven G. Krantz, Editor*
