Overview of HRP-mediated enzymatic polymerization

Recent progress in zincate-complex-mediated metathesis polymerization

Semiflexible star and ring polymer properties

Polymer Journal

Volume 46, Number 7, July 2014

FOCUS REVIEWS

- 373 **Development of HRP-mediated enzymatic polymerization under heterogeneous conditions for the preparation of functional particles**
Michinari Kohri
- 381 **Controlled synthesis of low-polydisperse regioregular poly(3-hexylthiophene) and related materials by zincate-complex metathesis polymerization**
Tomoya Higashihara and Eisuke Goto
- 391 **Synthesis of poly(diphenylacetylene)s bearing various polar groups and their gas permeability**
Toshikazu Sakaguchi and Tamotsu Hashimoto
- Physical Properties of Polymers
399 **Dilute solution properties of semiflexible star and ring polymers**
Daichi Ida

ORIGINAL ARTICLES

- Physical Properties of Polymers
405 **Effects of melt annealing on the miscibility and crystallization of poly(butylene succinate)/poly(ethylene succinate) blends**
Toshiyuki Kataoka, Kohji Hiramoto, Hideo Kurihara and Takayuki Ikehara
- Polymer Surface and Interfaces
412 **The effect of hot DMSO treatment on the γ -ray-induced grafting of acrylamide onto PET films**
Nazia Rahman, Nobuhiro Sato, Masaaki Sugiyama, Yoshiki Hidaka, Hirotaka Okabe and Kazuhiro Hara
- Biopolymers, Bio-related Polymer Materials
422 **Dielectric properties: a gateway to antibacterial assay—a case study of low-density polyethylene/chitosan composite films**
Madathil Sunilkumar, Ambalakkandy Abdul Gafoor, Abdulaziz Anas, Aareepuravan Parakkal Haseena and Athiyanathil Sujith
