Recent developments in polymer/protein nanofilms

Synthetic particles and biomacromolecules interactions

Chitosan derivative cholesteric liquid crystals

The Society of Polymer Science, Japan

nature publishing group

Polymer Journal

Volume 46, Number 9, September 2014

FOCUS REVIEWS

Polymer Structures

- 517 **Experimental verification of homogeneity in polymer gels**
Takamasa Sakai

Biopolymers, Bio-related Polymer Materials

- 524 **Control of extracellular microenvironments using polymer/protein nanofilms for the development of three-dimensional human tissue chips**
Michiya Matsusaki and Mitsuru Akashi

- 537 **Interaction between synthetic particles and biomacromolecules: fundamental study of nonspecific interaction and design of nanoparticles that recognize target molecules**
Yu Hoshino, Haejoo Lee and Yoshiko Miura

ORIGINAL ARTICLES

Polymer Synthesis and Reactions

- 546 **Synthesis and characterization of a mechanically linked transformable polymer**
Daisuke Aoki, Satoshi Uchida and Toshikazu Takata

- 553 **Synthesis of main chain-type liquid crystalline polyrotaxanes: influence of the wheel components and their mobility on liquid crystalline properties**
Yoko Abe, Hisashi Okamura, Satoshi Uchida and Toshikazu Takata

Polymer Structures

- 559 **Chiroptical properties of cholesteric liquid crystals of chitosan phenylcarbamate in ionic liquids**
Junichi Sato, Nobuhiro Morioka, Yoshikuni Teramoto and Yoshiyuki Nishio

Physical Properties of Polymers

- 568 **Effects of partial miscibility on the structure and properties of novel high performance blends composed of poly(*p*-phenylene sulfide) and poly(phenylsulfone)**
Saori Nara and Hideko T Oyama

- 576 **The preparation of well-controlled poly(*N*-cyclohexyl-*exo*-norbornene-5,6-dicarboximide) polymers**
Andrew M Spring, Feng Yu, Feng Qiu, Kazuhiro Yamamoto and Shiyoshi Yokoyama

- 584 **The structure and viscoelasticity of novolac resins**
Satoshi Maji, Osamu Urakawa and Tadashi Inoue

- 592 **Polymer foam-reinforced hydrogels inspired by plant body frameworks as high-performance soft matter**
Naozumi Teramoto, Ousuke Shigehiro, Yoshihisa Ogawa, Yoshiki Maruyama, Toshiaki Shimasaki and Mitsuhiro Shibata
